

Appendix A

Upstate and Northeastern California Connect Consortia Priority Unserved Communities

The Northeastern and Upstate California Connect Consortia (NECCC & UCCC) recommend that the commission to include the following list of unserved wireline communities in the CASF infrastructure priority areas. The following list of priority communities incorporates CASF infrastructure project selection criteria discussed in different venues in 2017 and 2018 by the CPUC, ISPs, regional broadband consortia and broadband advocacy groups, among other broadband stakeholders. The criteria include the following items: 1) unserved areas by wireline service, 2) household number threshold to generate a viable project, and 3) low income areas.

For applying the criteria above as follows:

- We used CPUC broadband availability data to identify unserved wireline areas at 6/1Mbps across the NECCC and UCCC regions. Then we defined “a community” as our basic unit for priority areas based on input from other regional broadband consortia and ISPs which stated that historically broadband deployments are planned and carried out in a community basis or one community at a time.
- We used Census data to calculate the number of unserved households in each of the communities. We defined a threshold of 50 unserved households for each priority community. This number of households was selected in order to increase project viability by ensuring projects will have a critical mass of customers.
- We used Census data to identify median income and selected a threshold of \$49,200, as proposed by the commission.

The unserved priority communities list presented in this appendix reflects our best effort to apply the criteria above under the rationale that they would lead to CASF infrastructure applications that would best serve our consortia region. However, we are aware that these criteria are not the only needs or even priority needs in our region and our consortia will continue working to support applications for other areas as well.
