

ViaSat Project Summary

Broadband Via Satellite for CA

A Broadband Internet Infrastructure Project

Topography and Other Challenges for Broadband Access

ViaSat, a Carlsbad, CA based satellite Internet service provider, will offer under the CASF program satellite broadband infrastructure to enable 12Mbps broadband Internet service for western California where there are large areas of Un- and Under-served households scattered across a rugged, challenging topography. From the dirt roads that segue California's Highway 1 along the Pacific Coast and those that lace into the highways along the great Central Valley, there are homes, businesses and schools that have dial-up or no connectivity to the Internet. Schools in Big Sur report that families live seven miles up a mountain trail, or deep in the Santa Lucia coastal canyons. Snail mail is the way of life, with no email connection to children's schools, no online interaction for children with their teachers and peers, and in reality, no reliable high-speed connectivity for the school itself.

This is a way of life for many areas across all of California. Many Un- and Under-served households share a rugged and challenging topography of mountains, canyons, redwood forests, creeks and beaches, or national, state and regional parks, as well as large areas of open spaces and the vast agricultural fields of the Central Valley. Some areas have been protected to preserve this natural beauty with oversight from the Coastal Commission, landowners' associations, and environmental regulations.

ViaSat is familiar with these remote regions, because these are like many others across the United States that we are seeking to serve with satellite Internet. The Federal Communications Commission (FCC) reported that as of August 2012, 19 million Americans live in households without access to high speed Internet —of which 14.5 million of those live in rural America. In fact, even outside of the U.S., ViaSat is actively working to provide high-speed satellite-based broadband, most recently with the Australian National Broadband Network (NBN Co). The Australian government has settled upon a combination of fiber and wireless/satellite to most cost effectively provide next-generation high-speed Internet to its citizens, and ViaSat is under contract to provide the satellite broadband ground infrastructure, starting with hundreds of thousands of Australian households.

In California, ViaSat has been working for some time with members of the Central Coast Broadband Consortium (CCBC), with California State University, Monterey Bay (CSUMB) as the lead, to explore the possibilities of a satellite-based infrastructure as a solution to cost-effectively reach these remote areas. Beyond Monterey County, we found that there is a very large swath of contiguous Un- and Under-served census block groups along the Western part of the state where we have next-generation satellite coverage. Indeed, these households are everywhere, not just in isolated geographic patches, but in every county, in almost every census block group!

ViaSat's high speed Internet solution is made possible by the launch in October 2011 of our next-generation ViaSat-1 high capacity satellite along with the associated fiber-based network of satellite gateways. This breakthrough satellite technology allowed ViaSat to launch our consumer Exede® service last year, offering 12 Mbps downstream speed and 3 Mbps upstream. ViaSat and the Exede service have already received widespread recognition for these achievements. ViaSat is the Guinness World Records® holder for the HIGHEST-CAPACITY COMMUNICATIONS SATELLITE for ViaSat-1. When this satellite was launched, it more than doubled the bandwidth that was previously provided by all other two-way communications satellites over North America *combined*, providing 10x the capacity of each previous generation Ka-band satellite, and 100x the capacity of each Ku-band satellite! The Exede service was a winner in the hardware category of the 2012 *Popular Science* "Best of What's New" special issue honoring innovations that "make a positive impact on our world today and challenge our view of what's possible in the future."

In our case, last mile infrastructure build-out is actually last few feet, where the infrastructure is completed with the installation of the satellite dishes and associated electronics. ViaSat has a network of 142 technicians in California who are certified to complete this build-out. These technicians are members of local communities throughout California, familiar with their local geography, community institutions, and fellow citizens.

Working with key community partnerships for outreach and dissemination, ViaSat will offer satellite broadband as a cost-effective solution for high-speed access to the Internet. This project aligns with California's objective for 80% home connectivity statewide by 2015—and 90% by 2020 — a goal that ViaSat and its partners will strive ardently to fulfill.

Map of ViaSat's Proposed Project:

The following table summarizes our proposed project:

Project Summary Table:

Applicant's name	ViaSat, Inc.
Contact person	Kristi Jaska
Project title	Broadband Via Satellite for CA
Proposed project area location	Western California (Un- and Under-served census blocks within a contiguous set of census block groups as indicated below)
Project type	Last mile
CASF funding request	\$11,130,997. grant / \$0 loan
Description of the project	12Mbps download / 3Mbps upload broadband infrastructure
Map of the proposed project	See above
List of census block groups	See below: 1447 CBGs containing 178,247 households
List of zip codes	See below: 589 Zip codes
