

# The Future of Broadband

22 January 2015

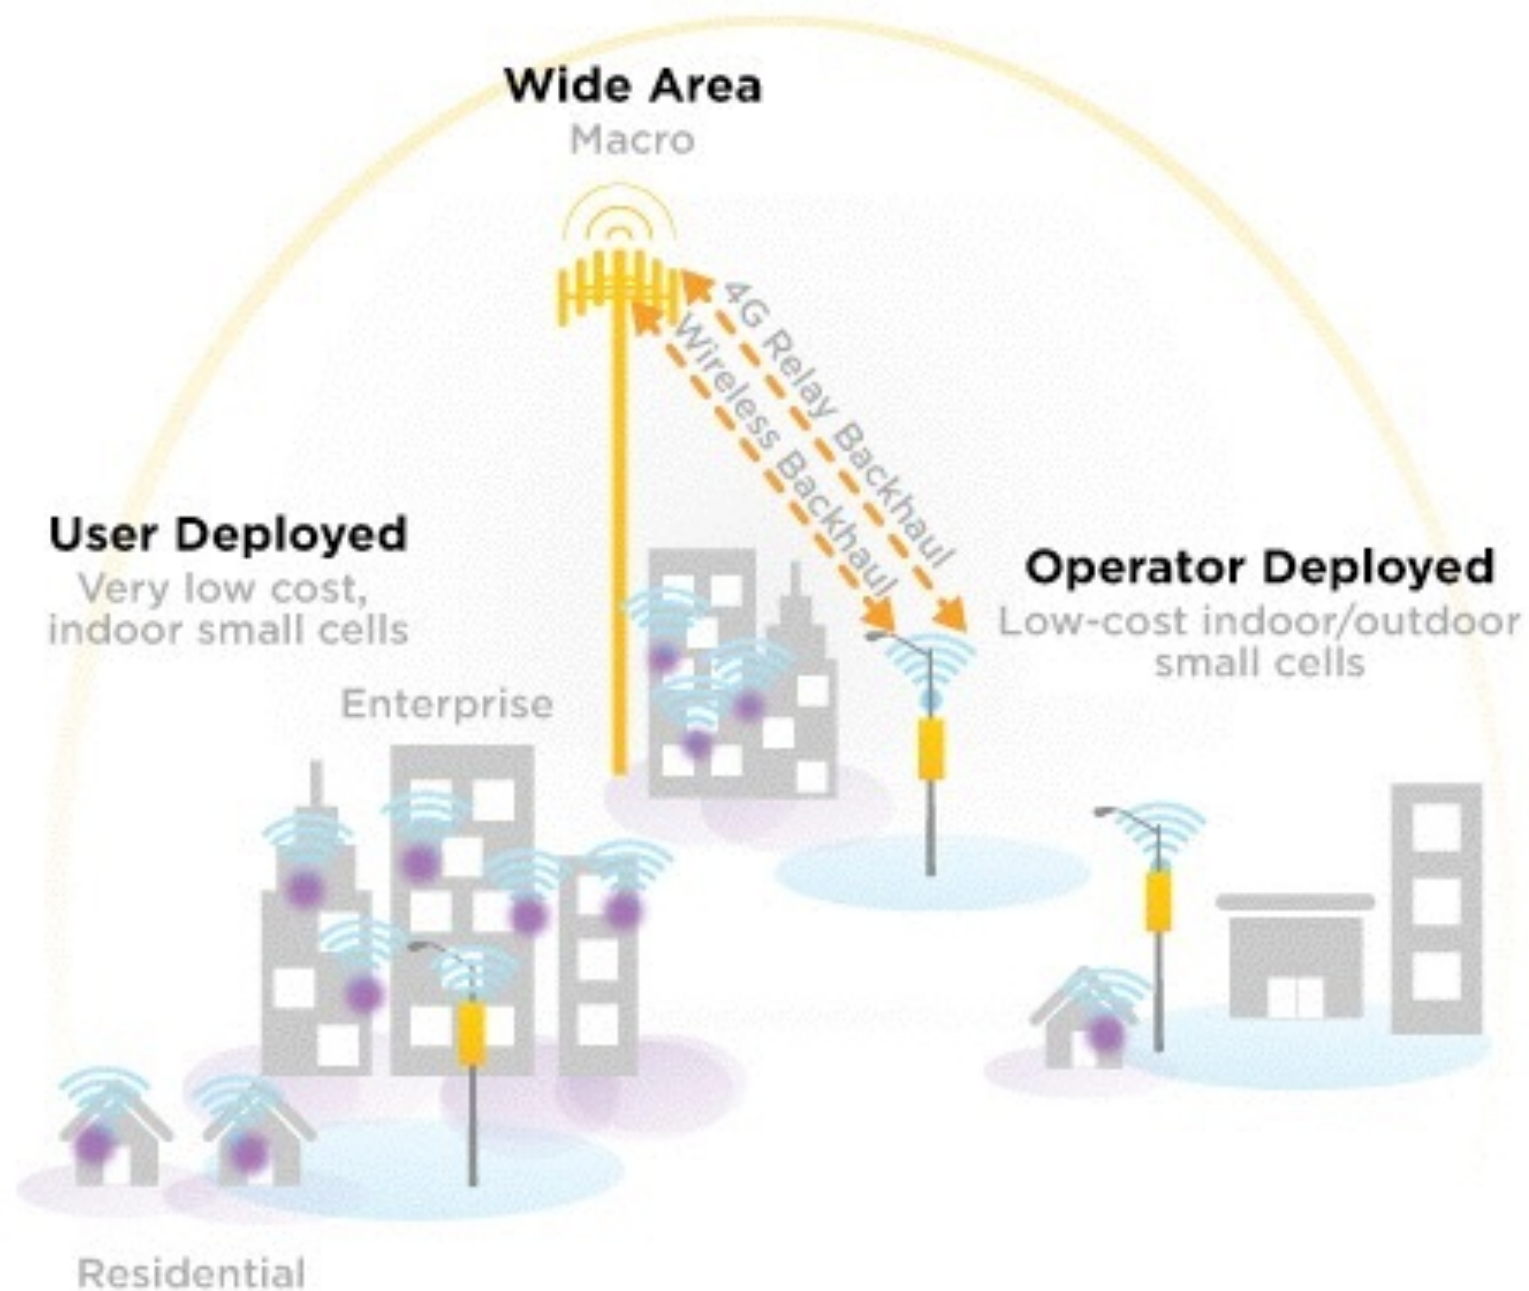

---

The future will look a lot  
like the past

Conduit is forever

The future will look a lot  
like the present

Only more of it

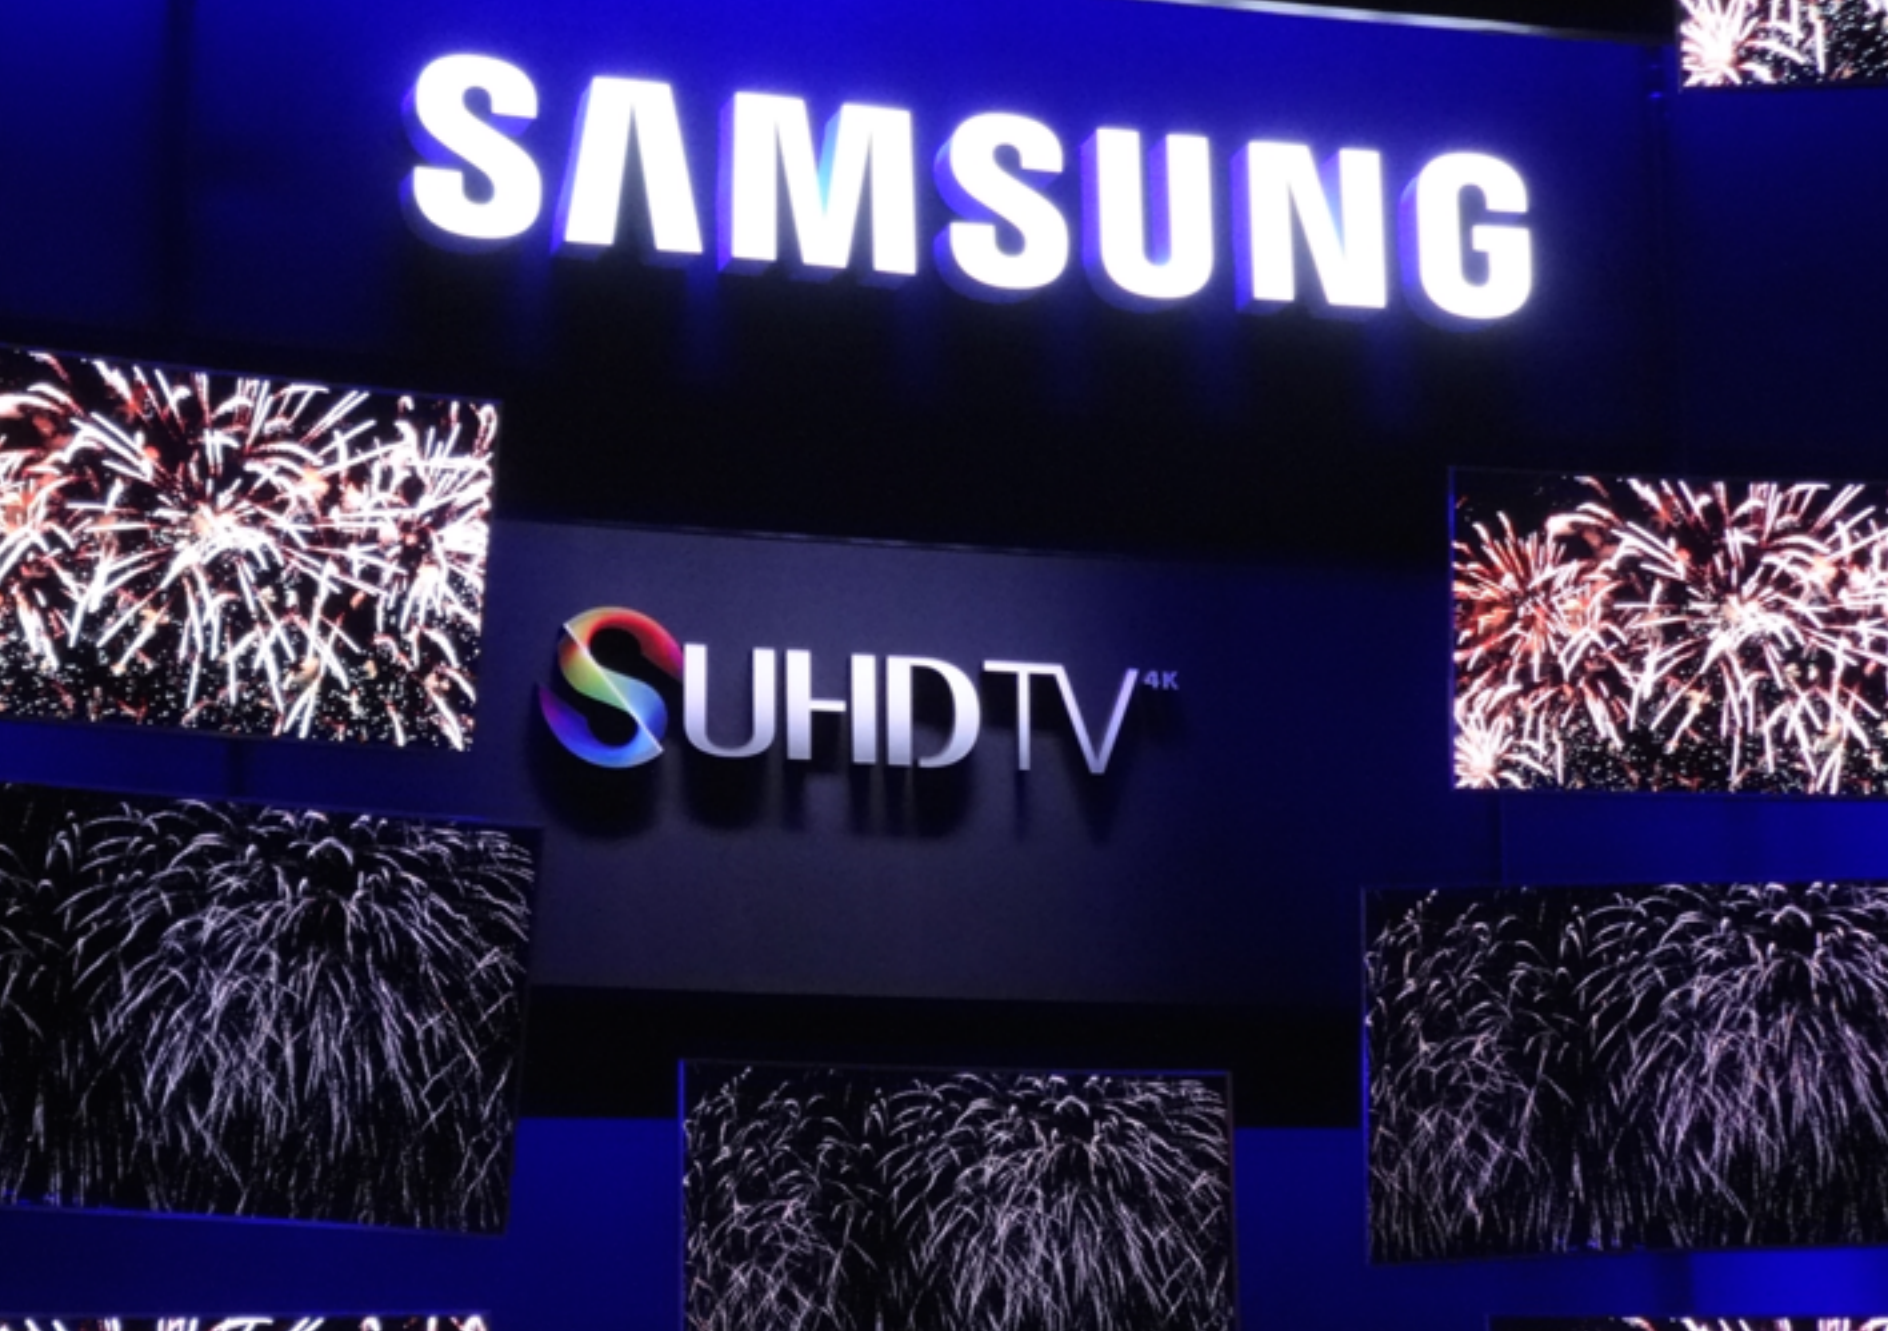

The future will look like  
something you've never seen

Reality will be augmented,  
virtual and maybe even real.

4K needs 15 Mbps,  
36 Mbps for sports

And that's only the beginning

The Internet of Things will  
work without you knowing it

Indoors and out

It's not just the future, it's the  
near future

Growing faster and faster

# Thank you!
